

Purina Foods

For over 80 years, Purina has worked to raise the standards for pet nutrition. Purina Veterinary Diets are formulated to help veterinarians nutritionally manage certain health conditions in dogs and cats. Each diet has been developed and tested by Purina nutritionists, scientists and veterinarians all working to understand how nutrition can benefit pets with special health needs. We carry a select group of Purina Veterinary Diets but are happy to order in what we don't carry. For more information go to www.proplanveterinarydiets.com.

The diets listed below are some of our more popular Purina Veterinary Diets:

Feline DM: DM is a diabetic maintenance diet that has high protein and low carbohydrates and high levels of antioxidants. This diet also helps prevent the development of struvite and calcium oxalate crystals. DM is available dry and canned.

Canine/Feline NF: NF is a diet that helps support kidney disease. This diet has restricted amounts of high-quality protein, reduced sodium and low phosphorus to help support the kidneys. It also has added B-complex vitamins. NF is available in dry and canned.

Canine NeuroCare: NeuroCare is used to help support dogs with epilepsy. It contains Omega-3 fatty acids to help support brain health, antioxidant vitamins E & C to support healthy immune system and it is high in protein to maintain lean muscle mass. NeuroCare is available in dry form.
